Good morning Todd

I think it important we refocus on the purpose of the CRD environmental presentation. It was to provide a factual, technical and scientific assessment of the environment at Island View Beach Regional Park - as it is now - to become a basis for moving forward with a new park management plan.

I see you have now added a "References" part to the CRD web site at <https://www.crd.bc.ca/project/other-projects-initiatives/island-view-beach-management-plan>. Would it have been too hard to have let us know?

But looking through these new references, none give support to your claim that the Common Nighthawk, the Fleshy Jaumea, the American Glehnia, or the Sand-Verbena moth, are resident in Island View Beach Regional Park. Instead we are left with your position that you were told this by the BC CDC but that you can't give us this information because you promised not to tell. With respect Todd, this is not factual, technical or scientific.

You tell us to contact the CDC and try to get the information ourselves from them, but it is you making this claim, not us, and the onus of proving your claim is on you. As you know, there have been many mistakes and misrepresentations by the CRD in the past about the environment at IVBRP and our role here is simply to fact check the claims made by the CRD.

We ask once more - please give us references that can be checked, to support your claim that the Common Nighthawk, the Fleshy Jaumea, the American Glehnia, and the Sand-Verbena moth, are resident now in Island View Beach Regional Park.

Thank you.
